Rhythm - Abnormalities -

Comments on medical history and physical findings: _____

The applicant should have no established medical history and/or clinical diagnosis that might reasonably be expected to make him/her unable to perform the rigors of competitive vintage racing during the two years (one year if over 60 years of age) that this license will be in effect.

On the basis of my exam and the history that was provided by the applicant, I recommend that the applicant

- is physically and psychologically fit to drive a race car in competitive events at high speeds
 is **NOT** physically and/or psychologically fit to drive a race car in competition at high speeds
